

## Dialam cleaning methodology aims for sustainable compliance

Dialam Sdn Bhd is an industrial cleaning specialist located in Johor, Malaysia. Together with our partner from Singapore, Greenchem Technology Pte Ltd, we provide a full spectrum of cleaning services for storage terminals and process plants.

In Dialam, we strive to create a safe workplace environment through the utilization of high technology equipment in our cleaning services.

Part of the full spectrum cleaning solution processes, we had incorporated a modern robotic cleaning system process. With this, we offer safer and more sustainable solutions when working in a confine and flammable area of the storage tanks, where there are both complex and dangerous operations involved.

In the process of cleaning, fall from scaffolding is a real risk and such risk must be prevented. The use of robotic cleaning system minimised the need for scaffolding as it clean and climb automatically without the need of a scaffolding, which avoided the risks of fall and injuries. This also help to reduce customers' downtime, if any, which will direct impact their costs and reputation. Dialam's cleaning methodology enables us to maximise efficiency without compromising safety.

As a newcomer to the OGA, we are glad to have such a great platform and opportunity to share and showcase our services to the potential customers in Malaysia and oil and gas companies in the SEA regions. – Tristant Lam, Director of Business Development of Dialam Sdn Bhd.
